

The Future of Watermaking

FCI Watermakers does more than build and sell watermakers. We invent the technology and advance the systems that are the future of marine desalination around the planet. Over a decade ago, FCI pioneered the integration of the UROC (Universal Reverse Osmosis Controller) which allowed features and automation never before seen in a watermaker. These attributes have become standards in today's desalinators: one-touch commands, multiple station operation and remote system control and monitoring. We continue to provide boaters with products that are always ahead of the curve. As both engineers and craftsmen, we specialize in high-performance, value-driven watermakers and are proud of the thousands of continuously operating units that have been cruising the globe for decades.

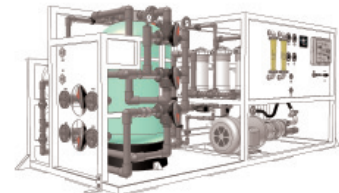

Aquamiser+ Series

Max-Q Series

Neptune Series

Poseidon and Titan Series

Why FCI Watermakers?

Solid Warranty Coverage: Unlike competitors that offer complicated and contradictory warranties that vary with terms and conditions that apply to individual components, the entire FCI marine series systems are covered for two years on all non-consumable parts.

More For Your Money: FCI Watermakers come complete. You don't need to buy add-ons, packages, accessories or upgrades to achieve rated outputs and superior performance. What's more, our inclusive pricing beats the retail price of systems by other manufacturers.

We Pass The Test: FCI does not test our watermakers on our customers. Extensive research and development are conducted on each product to guarantee optimum performance and dependability before it is approved as part of our product line. Once approved, every system is "wet-run", computer calibrated and cataloged after coming off the production line to ensure each watermaker measures up to our high standards and your expectations.

Always At Your Service: We engineer our watermakers to transcend your needs, and are committed to customer service that exceeds your expectations. With our on-call availability and our hands-on technical support, we promise to never leave you adrift — please call 714.850.0123 or visit us online at FCIwatermakers.com.

Exclusive and Uncompromising Engineering

Our Design Gives Boaters Control: Our open-frame and modular FCI systems are designed to facilitate visual inspections and routine, on-site maintenance. By comparison, competitors' enclosed-frame systems require complicated disassembly to allow shipboard inspection.

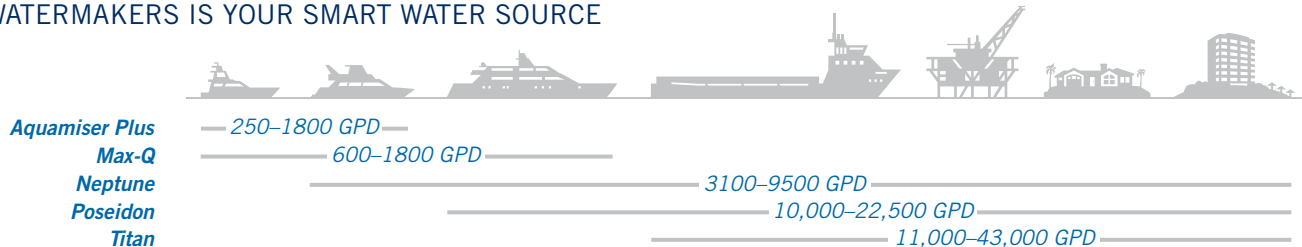

High-Grade Materials Assure Lasting Performance: FCI uses high grade alloys in all our critical components. Competing brands often use inferior material that compromise system operation and jeopardize the vessel. For example, plastic pumps installed below the waterline invite flooding if the pump is cracked or inadvertently stepped on.

More Reliability, Less Hassle: FCI systems are designed to be more tolerant of water conditions. Your vessel travels around the world and encounters water that varies in both salinity and particulate. FCI utilizes low RPM components that allow full function operation in the these conditions. Alternatively, competitors use pumps turning at over 3000 RPM that are so sensitive to feed water conditions that they require special "absolute" filtration to counter these conditions. This results in more frequent filter changes and added cost of operation. Their pumps are so sensitive that if you do not use their special filters you will void their warranty.

Non-proprietary Membranes. FCI Watermakers use commercially available, industry standard membranes. Competing brands often use more expensive proprietary membranes, available only at select locations. These elements can have less surface area, resulting in a lower quality water and a higher propensity for membrane fouling.

Enjoy Quick Water Satisfaction: FCI delivers watermakers that will be up and running instantly. Every unit arrives calibrated with no need to purchase additional accessories or calibration solutions to complete the set up.

FCI WATERMAKERS IS YOUR SMART WATER SOURCE

Trusted Ingenuity and Technology

FCI Water-Smart Intelligence Does The Work For You: Our systems feature automatic alerts, finger-tip data, customized one-touch operation and trouble-shooting prompts that are so easy and reliable to navigate, you'll think your entire watermaker consists of just a few buttons on your control panel.

Reliable Sure-Touch Operation: Tactile feedback of FCI's control panels eliminates operator error and provides automatic programming with at-a-glance monitoring. The tried and true technology and digital displays are resilient to all boating conditions, unlike touchscreens that potentially fail in high-temperature climates or engine rooms.

Introducing UROC-3G — FCI's exclusive Universal Reverse Osmosis Controller technology pioneered remote water making over a decade ago. Now with expanded capacity, it continues to be the smartest solution and the most advanced water making system on the market today.

While the UROC was once reserved for high output desalinators, FCI has set another standard by integrating this exclusive technology with enhanced features into our most popular watermakers. From the Max-Q Series to the commercial Titan Series, every system gives you the ability to program, customize, monitor and operate your desalinating system from a remote display or computer (using ANSI Terminal Emulators). Like its predecessors, the UROC-3G's user-friendly interface provides an on-screen troubleshooting guide and one-touch startup. Schedule unattended fresh water flushes by designating flush time and intervals that are suitable for your needs. UROC-3G advancements include:

- Motor overload protection, Voltage and amperage monitoring, Low-voltage and Over-amperage shutdown.
- Multiple remote station capabilities up to 4000 feet away or via ANSI Terminal Services. No special programs needed.
- Built-in audio and visual alarms that warn against any system performance issues, and provide on-screen assistance for corrective measures.
- More customized programming options for your system to operate under your specific needs.

FCI Watermakers — the true innovators of tomorrow's desalinators.
